SUBSTRATE WITH AN ANTI-SOILING COATING**INVENTORS**

**Hoa Thien Dang
Yannick MOYSAN**

A substrate having at least one main surface comprising a first coating deposited on said main surface and a second coating having anti-soiling properties deposited and adhering on the surface of said first coating,

- the first coating being a (meth)acrylate based coating and being obtained by polymerizing a polymerizable composition comprising:

i) at least one (meth)acrylate compound and

ii) at least one compound I having at least one - M-Z' bond with M representing Si or a Metal atom, Z' representing OH or a hydrolysable group, and at least one ethylenic unsaturated group or epoxy group, and/or

iii) at least one silica or metal oxide colloid having free ethylenically unsaturated groups; and

- the second coating, having anti-soiling properties, being obtained by depositing on said first coating an anti-soiling coating composition comprising at least one compound II, or a hydrolyzate thereof, having at least one - Si-Z'' group with Z'' representing OH or a hydrolysable group.
